| *课程简介（中文） Course Description | 本课程适合于想对表面科学有所了解的物理学科和材料学科博士研究生、硕士研究生。学生会学到现代表面科学里一些最重要的相关方面的知识。本课程的内容包括超高真空技术和各种表面分析技术的实验背景介绍，扫描隧道显微术和谱的原理基础，干净和有吸附物的晶体表面的原子和电子结构的研究，各种表面现象和性质的介绍，表面科学在薄膜生长和纳米结构形成方面的应用。选修本课程之前，需要学生在大学本科阶段已具备和了解量子力学和固体物理两门课程的相关基础知识。 | | | | | | |
| *课程简介 (English) Course Description | The course is designed for Doctoral-level and Master-level graduate students in physical and material sciences who want to get a general overview of surface science. The graduate students will learn the related knowledge on the most important aspects of modern surface science. This course includes the experimental background on ultra-high-vacuum technology and various surface analysis techniques, the basics of scanning tunneling microscopy and spectroscopy, the study on atomic and electronic structures of well-defined clean and adsorbate-covered crystal surfaces, introduction on a variety of surface phenomena and properties, application of surface science to thin film growth and nanostructure formation. Before taking the course, the graduate students should already know the necessary background information on quantum mechanics and solid physics. | | | | | | |

| *考核方式 Grading Policy | 该课程的考核方式是以课堂讨论和课后文献调研报告的方式进行。课程成绩按百分制计分，其中课堂讨论占总成绩的 30%，课后文献调研报告占总成绩的 70%。 The exam method of the course includes class discussion and after-class literature research report. The full mark of the course is 100, in which the class discussion accounts for 30% and the after-class literature research report accounts for 70%. | | | | |
